

Secur Communications for all

Business Description: SecurVoice[©] is the world's first totally secure, wireless, digital communications software only solution, for security and INTEROPERABILITY over wireless/VoIP communications. AVAILABLE TO ALL: EMERGENCY MANAGERS / FIRST RESPONDERS / EMS / FIRE / NATIONAL GUARD / STATE AND LOCAL LAW ENFORCEMENT / CRISIS MANAGERS / FEMA / DHS / HHS / SPORT TEAMS / CELEBRITIES / ETC.

SecurVoice[©] protects voice, data, and video: from being intercepted or scanned, -it is an unrecognizable digital transmission—Its interoperable capability allows global connection to all types of cell, satellite, Walkie-talkie, or VOIP devices. SecurVoice[©] is operating system, application platform, device and carrier independent and works with all existing legacy systems and with all existing network carriers. SecurDigital is delivering system-level technology solutions to the advanced wireless markets and is focused on the globally accepted FIPS 140-2, level 2 validation; and then on to Secret and NSA's Top Secret Certification.

Company Background: SecurDigital, Inc., was incorporated on October 22, 2009, in Delaware as a "C" corporation. On February 28, 2011, Ameristar Networks, Inc. (PINKSHEETS: AMWKD) announced the merger of SecurDigital, Inc. into a wholly-owned subsidiary was effective. SecurVoice[©] founders are experienced technology entrepreneurs and business professionals from the consumer, finance, technology, government and secure homeland industries with deep experience in Health, Financial and Emergency Management industries. The management team possesses a breadth of functional experience in software product development, system, and network integration, the marketing of emerging products, technologies, strategic collaborating, and corporate finance.

Technology Products and/or Services: SecurVoice[©] utilizes the KISS principal of architecture, eliminates exposure of communications to scanners or hackers, is patent pending, has a completely erected "Back Office infrastructure" providing the ability to add millions of licenses per day and is specifically designed for VoIP, wireless cell, satellite phones and radio (walkie-talkies) to address all Commercial and Government requirements. All this in a client controlled enterprise server, which you download as a 38kb JAVA APP and install with seven (7) simple steps, creating instant use. The Clients Enterprise Server additionally provides functions and features of total monitoring, recording, conferencing and controlling communications use and discussions for commercial and government customers, while using a SaaS model support, and performing "Wireless Interoperability" (IOT) Services for WiMAX and WiFi products globally.

Markets: SecurVoice[©] is designed to fulfill a major gap in protecting the increasing number of wireless phones in circulation; 2.6 billion cellular phones, by Gartner's estimation at the end of 2009. The primary commercial target markets include the Banking and Financial Services plus the Emergency Managers (FEMA & DHS) needing secure client communications to comply with Federal Regulations, providing Emergency Management crisis coordinators with interoperability to all State and Local Police, Fire Departments and the National Guard. World Country's (90+) are without landlines and have their citizens depending on cellular transmissions for Banking. Attorney/Client privileged communications; for Corporations sensitive discussions; as well as Individual consumer privacy. The World Health Organization and HIPPA regulations require privacy in voice and data transmissions of patient's health records between Hospitals, Doctors, Nurses, and other health providers now are required by law to secure cellular health monitoring systems.

Distribution Channels: SecurVoice[©] will be delivered initially through commercial and government resellers, i.e. Equity International and "SecurDigital of Europe Ltd." (EU and Middle East), "SecurDigital Latin America" (Central and South America), Africa, and the Philippines, with US Military Defense contractors as well.

Retailing: SecurVoice[©] will retail for \$9.95 per month for 24 months, +10% maintenance, & upgrades. Our next step is to work with the global carriers; T-Mobile, Sprint, Verizon, AT&T, BT, O2, Telefonica, Telmex, and Docomo and other providers of Cellular, Satellite, and Radio communications. The proposed world-class carriers will likely charge between \$0.99, \$4.95 and \$9.95 per month depending on volume market and mass acceptance, with royalties' ranging between 20% and 40% for SecurVoice[©].

Management: SecurDigital's executives include, CEO and President Bruce Magown, ex-CTO of Lehman Brothers and responsible for building Netscape to \$200 Million per year in revenue and who built Integration Technologies, Inc., with the integration platform "InterWeave", www.interweave.biz. Co-founder W. Steven Garrett has been involved in executive sales, strategic planning, marketing, and directing leading edge technology with start-up companies for over 35 years, including (www.phoenixgenesiscorp.com) by providing systems organization and business continuity methods, designs for IT and physical security and efficiency.
